

MINI-M0™

development board for STM32

The whole STM32 development board fitted in DIP40 form factor, containing high-performance STM32F051R8 ARM Cortex-M0 microcontroller.

TO OUR VALUED CUSTOMERS

I want to express my thanks to you for being interested in our products and for having confidence in MikroElektronika.

The primary aim of our company is to design and produce high quality electronic products and to constantly improve the performance thereof in order to better suit your needs.

Introduction to MINI-M0 for STM32

Miniature and high-performance development tool designed to work as stand alone device or as MCU card in DIP40 socket. MINI-M0 for STM32 is preprogrammed with USB-UART bootloader so it is not necessary to have external programmer. If there is need for external programmers (mikroProg™ or ST-LINK V2) attach it to MINI-M0 for STM32 via pads marked with PA14 (TCK/SWC), PA13 (TMS/SWD), and RST#.

Key features

- 01 Connection Pads
- 02 USB MINI-B connector
- 03 DATA LED
- 04 STAT LED
- 05 POWER supply LED
- 06 Reset button
- 07 Power supply regulator
- 08 Microcontroller STM32F051R8
- 09 16 MHz Crystal oscillator
- 10 32.768kHz Crystal oscillator
- 11 FTDI FT230x chip
- 12 UART RX LED
- 13 UART TX LED

System Specification

power supply

3.3V via pads or 5V via USB

power consumption

depends on MCU state (max current into 3.3V pad is 300mA)

board dimensions

50.8 x 17.78mm (2 x 0.7")

weight

~6g (0.013 lbs)

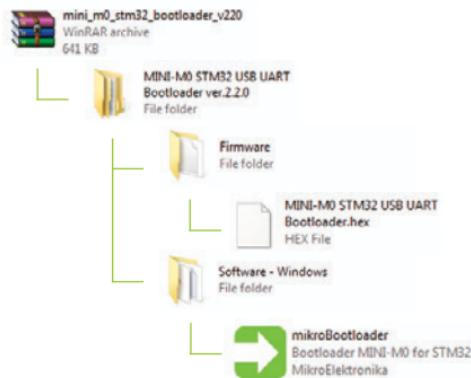

1. Programming with mikroBootloader

You can program the microcontroller with bootloader which is preprogrammed into the device by default. To transfer .HEX file from a PC to MCU you need bootloader software (**UART mikroBootloader**) which can be downloaded from:

http://www.mikroe.com/downloads/get/2055/mini_m0_bootloader_v220.zip

After software is downloaded unzip it to desired location and start mikroBootloader USB UART software.

mikroBootloader software

note

Before starting mikroBootloader software, connect MINI M0 for STM32 to a PC using a USB cable provided with the package

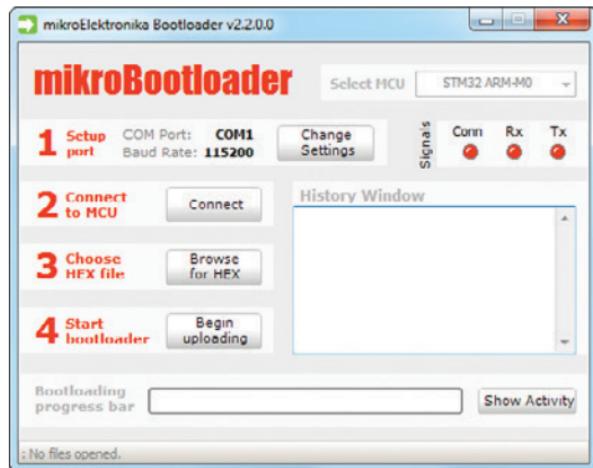

Figure 2-1: mikroBootloader window

- When you start mikroBootloader software, a window as shown in **Figure 2-1** should appear

Identifying device COM port

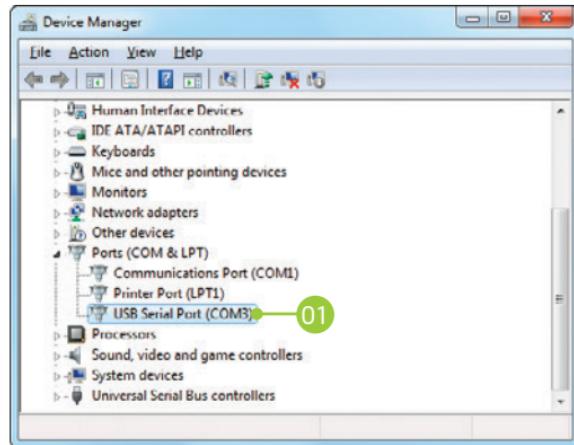

Figure 2-2: Identifying COM port

- 01 Open **Device Manager** window and expand **Ports section** to see which COM port is assigned to MINI M0 for STM32 (in this case it is COM3)

step 1 - Choosing COM port

Figure 2-3: Choosing COM port

- 01 Click the **Change Settings** button
- 02 From the drop down list, select appropriate **COM port** (in this case it is COM3)
- 03 Click **OK**

step 2 - Establishing Connection

Figure 2-4: Connecting with mikroBootloader

- 01 Press the **Reset** button on MINI M0 for STM32 board and click the **Connect** button within 5s, otherwise the existing microcontroller program will run. If connected, the button's caption will be changed to **Disconnect**

step 3 - Browsing for .HEX file

Figure 2-5: Browse for HEX

- 01 Click the **Browse for HEX** button and from a pop-up window (Figure 2-6) choose a .HEX file to be uploaded to MCU memory

step 4 - Selecting .HEX file

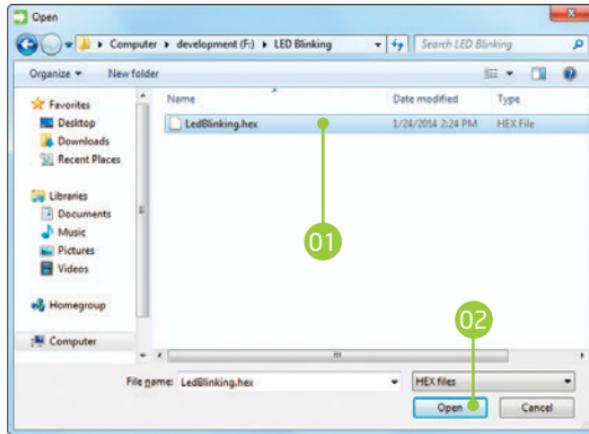

Figure 2-6: Locating and selecting .hex file

- 01 Select .HEX file using open dialog window.
- 02 Click the **Open** button

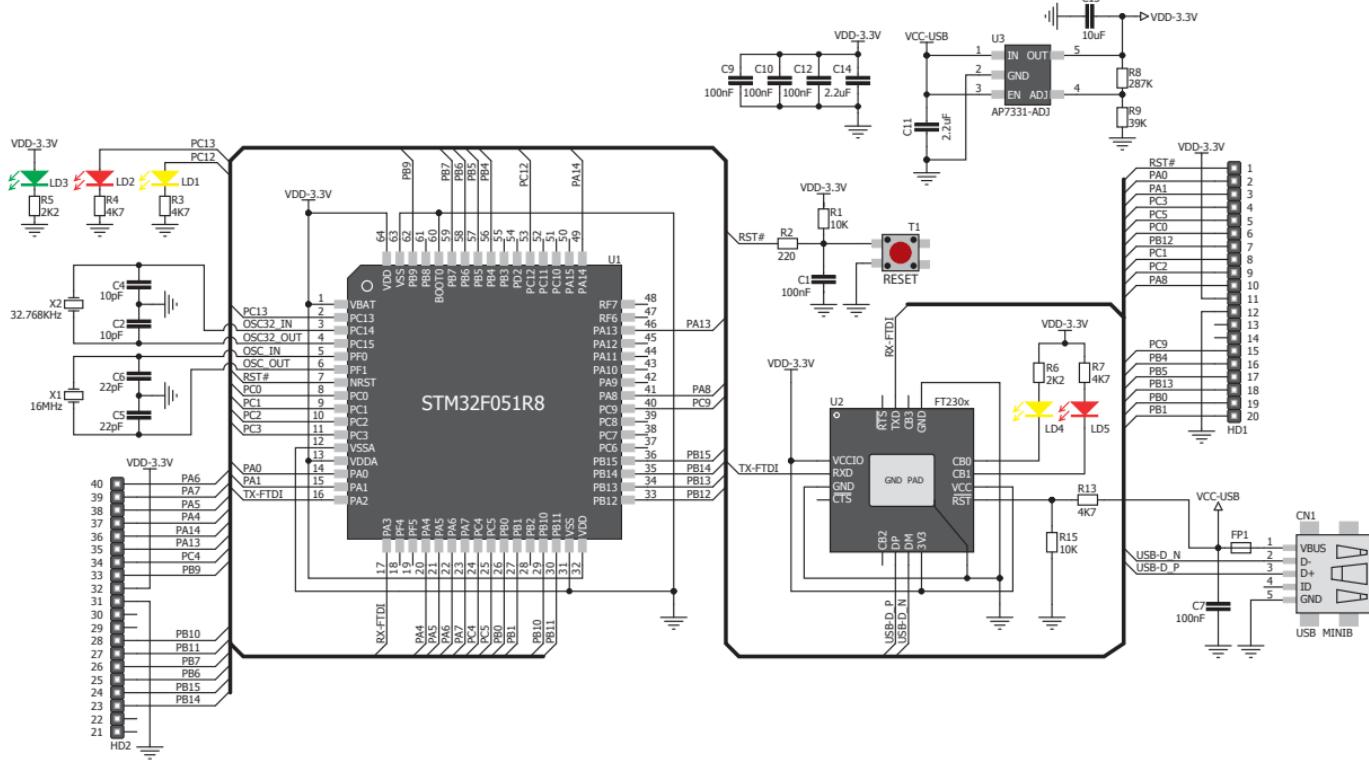

step 5 - Uploading .HEX file

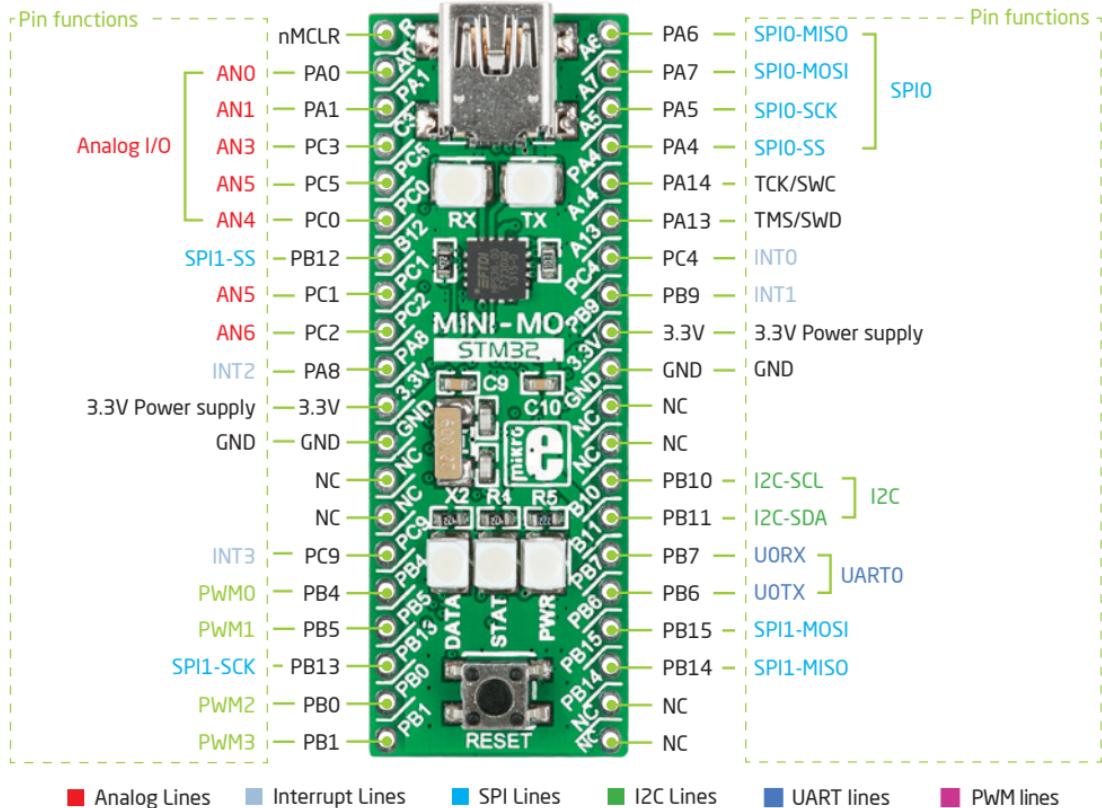

Figure 2-7: Begin uploading

- 01 To start .HEX file bootloading click the **Begin uploading** button
